iFill Refuelling System
## Version 1.0

Step 1

To access the iWantFuel iFill screen, simply *"Tap"* your iWantFuel NFC sticker with your smartphone.
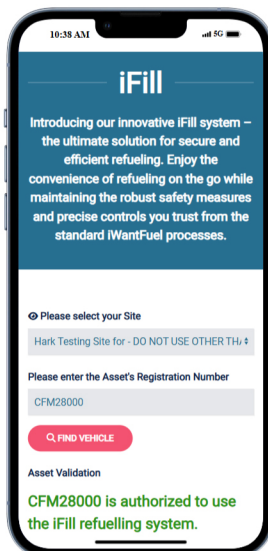

Important:

Ensure that your device is unlocked and the device's NFC feature is enabled. You can use any smartphone to complete the tap.

Step 2
Your NFC Options

Click or press on the iFill Button.

Step 3

Enter Vehicle Registration

Input the vehicle's registration number and click the "Find Vehicle" button.

Authorization Check

The system will verify whether the vehicle is authorized and loaded for refueling. If the vehicle is not authorized, you will receive a notification instructing you not to refuel it.

Version 1.0

Step 4

Driver SMS

After entering the driver's mobile number, click the 'Find Driver' button.

The system will automatically match the driver to the vehicle, verify their details against the client's driver database, and instantly send an ifILL OTP (One-Time Pin) via SMS.

Step 5

Once the OTP is validated and matches, the system will confirm the product type and quantity you are authorized to refuel for the vehicle.

IMPORTANT

You may supply less than the authorized amount, but never exceed the specified limit.

For example, if the system authorizes 80 liters, do not supply more than 80 liters under any circumstances.

Step 6

You can proceed to refuel the vehicle by following the same steps as for a standard iWantFuel order. If you need any assistance, our support team is always ready to help—don't hesitate to reach out.
